

*Toronto\_60410\_2018/Toronto\_60410\_2018\_Day14to20.csv*

The results below are what the student results should look like for the Toronto\_60410\_2018/Toronto\_60410\_2018\_Day14to20.csv dataset used in CHM 135 Experiment 1.

Figure 1: Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it.

Figure 2: Correlation plot of O<sub>3</sub> vs. NO<sub>2</sub>; the equation of the line is displayed in the lower left corner.

| pollutant | mean | sd  | median | min | max |
|-----------|------|-----|--------|-----|-----|
| NO2       | 19.1 | 8.8 | 18     | 2   | 41  |
| O3        | 19.3 | 9.4 | 20     | 1   | 37  |
| OX        | 38.4 | 2.8 | 38     | 31  | 47  |
| NO2_8hr   | 18.6 | 7.4 | 18     | 2   | 37  |
| O3_8hr    | 19.7 | 8.3 | 19     | 3   | 36  |
| OX_8hr    | 38.3 | 2.4 | 38     | 32  | 45  |

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

#### Notes on results:

Students are **not** expected to calculate *mean*, *sd*, and *median* of 8 hr averages. If student *sd* values differ slightly from provided *sd* values,

they may have used the *STDEV.P* function rather than *STDEV.S* in Excel calculations. Do not subtract points, but make a note of it.
