

Toronto_60435_2018_Day3to9.csv

The results below are what the student results should look like for the Toronto_60435_2018_Day3to9.csv dataset used in CHM 135 Experiment 1.

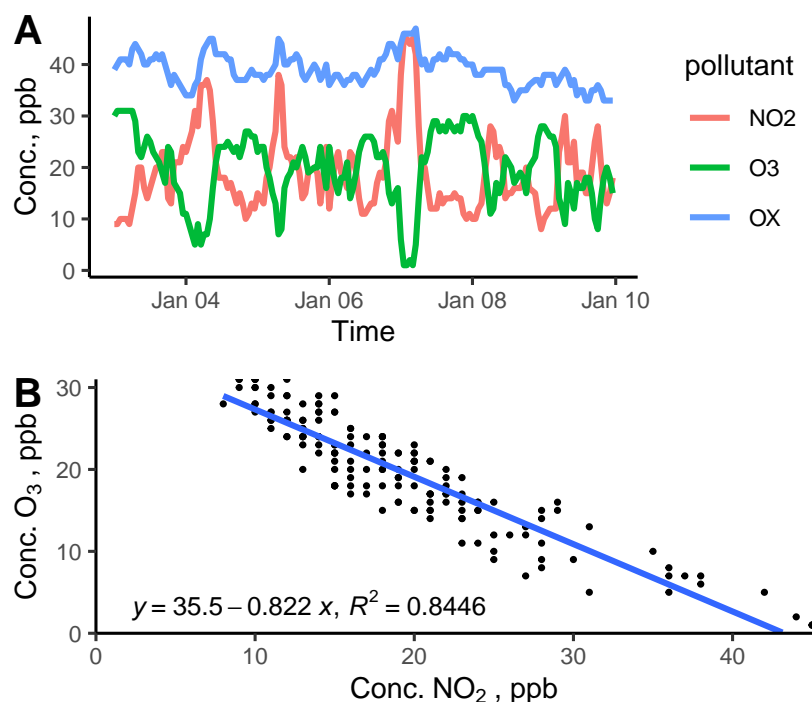

Figure 1: (A) Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it. (B) Correlation plot of O₃ vs. NO₂; the equation of the line is displayed in the lower left corner.

pollutant	mean	sd	median	min	max
NO2	19.2	7.8	18	8	45
O3	19.8	7.0	21	1	31
OX	39.0	3.1	39	33	47
NO2_8hr	19.4	6.4	18	10	41
O3_8hr	19.6	5.9	20	4	31
OX_8hr	39.0	2.6	39	34	45

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

Notes on results:

Students are **not** expected to calculate *mean*, *sd*, and *median* of 8 hr averages. If student *sd* values differ slightly from provided *sd* values, they may have used the *STDEV.P* function rather than *STDEV.S* in Excel calculations. Do not subtract points, but make a note of it.
