Toronto 60433 2018 Day194to200.csv

The results below are what the student results should look like for the Toronto_60433_2018_Day194to200.csv dataset used in CHM 135 Experiment 1.

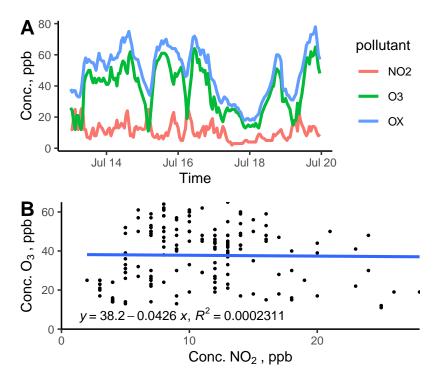

Figure 1: (A) Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it. (B) Correlation plot of O3 vs. NO2; the equation of the line is displayed in the lower left corner.

| pollutant | mean | sd | median | min | max |
|-----------------------------|------|---------------------|--------|-----|-----|
| NO2 | 10.9 | 5.4 | 10 | 2 | 28 |
| O3 | 37.8 | 15.1 | 41 | 11 | 65 |
| OX | 48.7 | 15.9 | 53 | 18 | 78 |
| $\rm NO2_8hr$ | 10.8 | 3.9 | 11 | 3 | 20 |
| $\mathrm{O3}_8\mathrm{hr}$ | 37.8 | 13.3 | 42 | 14 | 60 |
| OX_8hr | 48.6 | 15.0 | 53 | 18 | 72 |

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

Notes on results:

Students are **not** expected to calculate mean, sd, and median of 8 hr averages. If student sd values differ slightly from provided sd values, they may have used the STDEV.P funcation rather than STDEV.S in Excel calculations. Do not substract points, but make a note of it.
