$Toronto_60435_2018_Day 188 to 194. \, csv$

The results below are what the student results should look like for the Toronto_60435_2018_Day188to194.csv dataset used in CHM 135 Experiment 1.

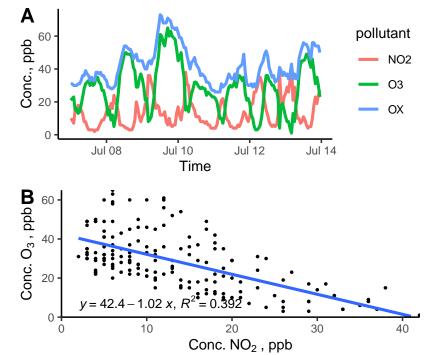

Figure 1: (A) Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it.
(B) Correlation plot of O3 vs. NO2; the equation of the line is displayed in the lower left corner.

pollutant	mean	sd	$_{ m median}$	\min	max
NO2	13.5	9.0	11	2	42
O3	28.5	14.7	28	1	65
OX	42.1	11.4	39	26	73
$\rm NO2_8hr$	13.4	7.1	12	3	30
$\mathrm{O3}_8\mathrm{hr}$	28.6	13.0	28	6	61
$\mathrm{OX}_{-}8\mathrm{hr}$	42.1	10.7	39	27	70

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

Notes on results:

Students are **not** expected to calculate mean, sd, and median of 8 hr averages. If student sd values differ slightly from provided sd values, they may have used the STDEV.P funcation rather than STDEV.S in Excel calculations. Do not substract points, but make a note of it.
