Toronto 60433 2018 Day2to8.csv

The results below are what the student results should look like for the Toronto_60433_2018_Day2to8.csv dataset used in CHM 135 Experiment 1.

y = 34.7 - 0.822 x, $R^2 = 0.8529$

10

Figure 1: (A) Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it. (B) Correlation plot of O3 vs. NO2; the equation of the line is displayed in the lower left corner.

pollutant	mean	sd	median	min	max
NO2	15.4	7.2	14	5	42
O3	22.0	6.4	23	2	33
OX	37.4	2.8	37	32	45
$\rm NO2_8hr$	15.2	5.7	15	6	36
$\mathrm{O3}_8\mathrm{hr}$	22.1	5.2	23	7	31
OX_8hr	37.4	2.5	37	33	44

20

Conc. NO₂, ppb

30

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

Notes on results:

0

Students are **not** expected to calculate *mean*, *sd*, and *median* of 8 hr averages. If student *sd* values differ slightly from provided *sd* values, they may have used the *STDEV.P* funcation rather than *STDEV.S* in Excel calculations. Do not substract points, but make a note of it.
