## $Toronto\_60410\_2018/Toronto\_60410\_2018\_Day180to186.csv$

The results below are what the student results should look like for the  $Toronto\_60410\_2018/Toronto\_60410\_2018\_Day180to186.csv$  dataset used in CHM 135 Experiment 1.

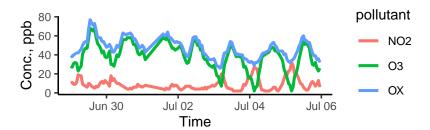

Figure 1: Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it.

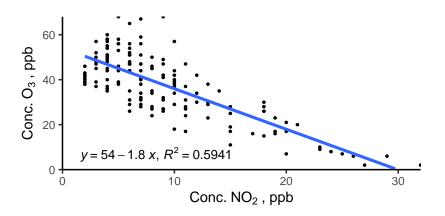

Figure 2: Correlation plot of O3 vs. NO2; the equation of the line is displayed in the lower left corner.

pollutant	mean	$\operatorname{sd}$	median	$\min$	max
NO2	8.9	6.1	7	2	32
O3	38.0	14.3	40	2	68
OX	46.9	10.4	47	26	77
$\rm NO2\_8hr$	8.9	5.1	7	2	24
$\mathrm{O3}_{-}8\mathrm{hr}$	38.4	12.4	41	10	62
$\mathrm{OX}_{-}8\mathrm{hr}$	47.2	9.1	47	30	69

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

## Notes on results:

Students are **not** expected to calculate *mean*, *sd*, and *median* of 8 hr averages. If student *sd* values differ slightly from provided *sd* values,

they may have used the STDEV.P funcation rather than STDEV.S in Excel calculations. Do not substract points, but make a note of it.
