## Toronto\_60433\_2018\_Day184to190.csv

The results below are what the student results should look like for the  $Toronto\_60433\_2018\_Day184to190.csv$  dataset used in CHM 135 Experiment 1.

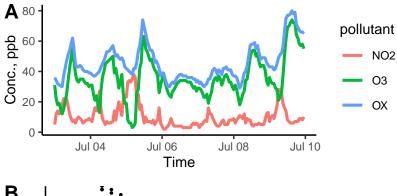

Figure 1: (A) Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it.
(B) Correlation plot of O3 vs. NO2; the equation of the line is displayed in the lower left corner.

Conc. O <sub>3</sub> , ppb <b>B</b>	$y = 45.6 - 0.993 x$ , $R^2 = 0.2778$	1
0	10 20 3	0
	Conc. NO <sub>2</sub> , ppb	

pollutant	mean	$\operatorname{sd}$	median	min	max
NO2	10.3	7.4	8	2	38
O3	35.3	14.0	33	3	74
OX	45.6	11.9	42	29	80
$ m NO2\_8hr$	10.3	6.4	8	3	33
$O3\_8hr$	35.2	11.8	33	7	70
$\mathrm{OX}_{-}8\mathrm{hr}$	45.5	10.7	43	32	78

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

## Notes on results:

Students are **not** expected to calculate mean, sd, and median of 8 hr averages. If student sd values differ slightly from provided sd values, they may have used the STDEV.P funcation rather than STDEV.S in Excel calculations. Do not substract points, but make a note of it.
