Toronto 60435 2018 Day181to187.csv

The results below are what the student results should look like for the Toronto_60435_2018_Day181to187.csv dataset used in CHM 135 Experiment 1.

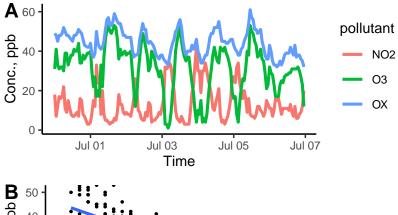

Figure 1: (A) Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it.
(B) Correlation plot of O3 vs. NO2; the equation of the line is displayed in the lower left corner.

Couc. O. 30 - 10 - 10 - 10 - 10 - 10 - 10 - 10 -	y = 47.3 - 1.23 x, $y = 47.3 - 1.23 x$	$R^2 = 0.7391$

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

Notes on results:

Students are **not** expected to calculate mean, sd, and median of 8 hr averages. If student sd values differ slightly from provided sd values, they may have used the STDEV.P funcation rather than STDEV.S in Excel calculations. Do not substract points, but make a note of it.
