## $Toronto\_60410\_2018/Toronto\_60410\_2018\_Day191to197.csv$

The results below are what the student results should look like for the  $Toronto\_60410\_2018/Toronto\_60410\_2018\_Day191to197.csv$  dataset used in CHM 135 Experiment 1.

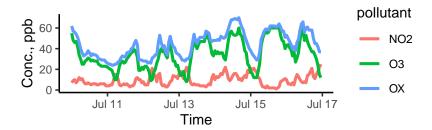

Figure 1: Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it.

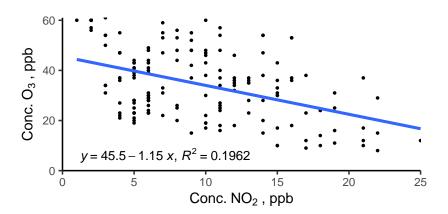

Figure 2: Correlation plot of O3 vs. NO2; the equation of the line is displayed in the lower left corner.

pollutant	mean	$\operatorname{sd}$	median	$\min$	max
NO2	9.5	5.3	9	1	25
O3	34.5	13.9	34	8	61
OX	44.1	12.5	45	24	70
$ m NO2\_8hr$	9.4	4.0	9	2	18
$\mathrm{O3}\_8\mathrm{hr}$	34.5	12.1	34	13	60
$\mathrm{OX}_{-}8\mathrm{hr}$	43.9	11.5	43	25	68

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

## Notes on results:

Students are **not** expected to calculate mean, sd, and median of 8 hr averages. If student sd values differ slightly from provided sd values,

they may have used the STDEV.P funcation rather than STDEV.S in Excel calculations. Do not substract points, but make a note of it.
