Toronto_60435_2018_Day14to20.csv

The results below are what the student results should look like for the Toronto_60435_2018_Day14to20.csv dataset used in CHM 135 Experiment 1.

Figure 1: (A) Time series of pollutant concentration. There shouldn't be a linear regression on this plot, if students have done so please note it. (B) Correlation plot of O3 vs. NO2; the equation of the line is displayed in the lower left corner.

In plot B: $y = 36.8 - 0.912\,x$, $R^2 = 0.8557$

Table 1: Summary statistics for 1 hr and 8hr concentration of pollutants, all concentrations are in ppb.

pollutant	mean	sd	median	min	max
NO2	18.0	9.7	15	4	47
O3	20.4	9.5	21	1	35
OX	38.4	3.7	38	28	50
NO2_8hr	17.5	7.9	15	5	41
O3_8hr	20.8	8.3	21	2	33
OX_8hr	38.3	3.2	39	30	45

Notes on results:

Students are **not** expected to calculate *mean*, *sd*, and *median* of 8 hr averages. If student *sd* values differ slightly from provided *sd* values, they may have used the *STDEV.P* funcation rather than *STDEV.S* in Excel calculations. Do not substract points, but make a note of it.
